Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
The invention relates to a fluorescent protein derived from green

fluorescent protein (GFP) or its analogue. The GFP containing mutations

at FeAL and E2226 has a bigger compared to other GFP's making it very

cuitable for high throughput screening due to better resolution. The

fluorescent protein is useful in invitro assays for measuring protein

kinase activity or dephosphorylation activity, or for measuring protein

cucistribution. The fluorescent protein tags in transgenic animals, living

and fixed cells; organelle tags, secretion marker and genetic reporter.

The fluorescent protein is also useful as a cell or organelle integrity

marker, a marker for changes in cell morphology, as transfection marker,

and as a marker to be used in combination with fluorescence activated

cell sorting (FACS). The novel proteins can also be used as reporters to

monitor live or dead biomass of organisms, such as fungi. The fluorescent

protein is also useful as markers in transcriptional and translational

fusions for performing transposon vector mutagenesis and as a reporter

for bacterial detection. Transposons encoding the fluorescent protein are

useful for screening prometers and for tagging plasmids and chromosomes.

The fluorescent protein engineered into the genome of a phage is useful

for designing diagnostic tool. The present sequence is a DNA encoding

enhanced F64L-E222G jellyfish green fluorescent protein (GFP) mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LVTVLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The invention relates to a novel cell, comprising three heterologous conjugates (HC), a first HC (HCI) comprising an anchor protein that specifically binds to an internal structure within the cell conjugated to an interact or type A a second HC (HC2) comprising IP of type B conjugated to a first protein of interest, and a third HC (HC3) comprising a second protein of interest conjugated to detectable group. The cell is useful for detecting if a compound disrupts or induces the interaction between two intracellular proteins. The cell is also useful for accompounds that modulate the interaction between two intracellular proteins. The cell is also useful intracellular proteins. The proteins the interaction between two exemplification of the invention

first conjugate comprising anchor protein, second conjugate having type B interactor protein and third conjugate with detectable group.

Disclosure, Page 112-113; 118pp; English

cell for identifying modulators of protein interaction, contains a conjugate comprising anchor protein, second conjugate having type B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                The invention relates to determining, if a compound, is a dislocator of PDE4. The method comprises testing if the compound removes PDE4 spots, which may optionally be induced by a Roliptam-like reference compound, and testing if it inhibits the catalytic activity of the PDE4, where the compound is a dislocator of PDE4, if it removes PDE spots and if it does not inhibit the catalytic activity of PDE4. The method is useful for identifying compounds useful for the treatment of diseases of the central nervous system such as depression and for the treatment of inflammatory disease such as joint inflammation, Crohn's disease, inflammatory bowel compounds as joint inflammation, Crohn's disease, inflammatory bowel compounds as the chronic bronchitis, pulmonary emphysema, endotoxic shock, toxic shock syndrome, systemic lupus erthematosis, psoriasis, bone resorption diseases, reperfusion injury, cancer and HIV the use of a reagent that can mimic or reverse the effect of the compound with affinity for the catalytic site on intracellular distribution of the PDE for the preparation of a medicament. The present sequence represents the amino acid sequence of a HSPDE4A1-E22G fusion
                                                                                        Determining if a compound is a dislocator of PDE4 for identifying compounds for treating CNS and inflammatory disease comprises identifying compounds which remove PDE4 spots.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       655 MVSKGEELFIGVVPILVELDGDVNGHKFSVSGEGEGDATYGKLTLKFICTTGKLPVPWPT 714

The invention relates to determining, if a compound, is a dislocator of PDE4. The method comprises testing if the compound removes PDE4 spots, which may optionally be induced by a Rolipram-like reference compound, and testing if it inhibits the catalytic activity of the PDE4, where the compound is a dislocator of PDE4, if it removes PDE spots and if it does not inhibit the catalytic activity of PDE4. The method is useful for compound useful for the treatment of diseases of the central nervous system such as depression and for the treatment of inflammatory disease such as joint inflammation, Crohn's disease, inflammatory bowel disease, respiratory diseases, chronic obstructive pulmonary disease (COPD), including asthma, chronic bronchitis, pulmonary emphysema, endotoxic shock, toxic shock syndicame, systemic lupus erthemators, psoriasis, bone resorption diseases, reperfusion injury, cancer and HIV infection. The use of a reagent that can mimic or reverse the effect of the compound with affinity for the catalytic site on intracellular distribution of the PDE for the preparation of a medicament. The present sequence represents the amino acid sequence of a HSPDE4A4-E222G fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             954 LVTTLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 1013

thorescent protein (GFP) or its analogue. The GFP containing mutations at F64L and E222G has a bigger compared to other GFP's making it very suitable for high throughput screening due to better resolution. The fluorescent protein is useful in invitro assays for measuring protein kinase activity or dephosphorylation activity, or for measuring protein rediscribution. The fluorescent protein is useful in studying cellular functions in living cells; as protein tags in transgenic animals, living and fixed cells; organelle tags, secretion marker and genetic reporter. The fluorescent protein is also useful as a cell or organelle integrity marker, a marker for changes in cell morphology, as transfection marker, and as a marker to be used in combination with fluorescence activated cell sorting (FACS). The novel proteins can also be used as reporters to monitor live or dead biomass of organisms, such as fungi. The fluorescent protein is also useful as markers in transcriptional and translational fusions for performing transposons encoding the fluorescent protein are useful for screening promoters and for tagging plasmids and chromosomes. The fluorescent protein are fluorescent protein engineered into the genome of a phage is useful for designing diagnostic tool. The present sequence is enhanced F64L jellyfish green fluorescent protein (GFP) mutant The invention relates to a fluorescent protein derived from green

Sequence 239 AA;

ò,

concerning the compounds which affect particular biological functions. The methods of the invention utilise fluorescent biodetector functions. The methods of the invention utilise fluorescent biodetector components which, when acted on by a compound of interest, cause an alteration in the cellular distribution of at least the fluorescent conjecty. In one embodiment, the biosensors comprise heat shock proteins (HSPs) fused to a fluorescent protein (e.g., jellyfish green fluorescent protein (GPP), or derivatives thereof). Such biosensors are located in the cytoplasm, but on stress activation translocate to the nucleus. In another embodiment biodetector proteins can be used to detect protease cetivity. Such protease biodetector fusion proteins one or more fluorescent proteins; a recognition signal which is cleaved by the protease, and at least one cellular localisation signal. The latter two components may be components of a single protein which is acted upon by the protease, or may be from heterologous sources. Due to the consonents may be from heterologous sources. Due to the consonents may be acted on by the protease of interest, the fluorescent protein signal attached to the fluorescent protein contains at localisation signal attached to the fluorescent protein enables the fluorescent protein to be directed to a different cellular compartment after cleavage of the protease recognition sequence. The change in distribution of the fluorescent protein can be detected using imaging methods with a high degree of spatial resolution. The methods and imaging methods and 121 VNRIELKGIDFKEDGNILGHKLEYNYNSHNYYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180 Biodetector protein; fusion protein; recognition site; cellular targetting sequence; cellular localisation; fluorescent protein; protease activity detection; toxin detection; cellular stress detection; drug discovery; cell based screening. 181 DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLGFVTAAGITLGMDELYK 239 181 DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLEFVTAAGITLGMDELYK 239 The invention relates to systems, methods and reagents for cell-based Automated cell-based characterization of toxin by contacting cells containing luminescent reporter molecules with test substance and Enhanced green fluorescent protein (EGFP), SEQ ID NO:46. cellular activities and to screen compounds which modulate these example, may be used for the screening of compounds which modulate apoptosis, while blosensors containing a recognition site for caspase, for apoptosis, while blosensors containing other protease recognition sites may be used for the detection of proteolytic toxins (such as anthrax lethal factor). The method provides improved target validation and candidate compound optimisation by combining many cell screening formats with fluorescence-based molecular reagents and computer-based feature and speed of data analysis and automation, resulting in increased quantity sextraction, data collection and faster evaluation of drug candidates. Sequences AAB22881-B22885 represent fluorescent proteins which may used as components of biosensor fusion proteins of the invention

The emission intensity changes as pH varies between 5 and 10 of the present protein are novel. The functional engineered fluorescent proteins show reversible changes in fluorescence over physiological pH ranges. They can be used for determining the pH of samples and cells. The polynucleotides can also be used to produce transgenic animals. The fluorescent protein pH sensors can be delivered to cells in the form of polynucleotides encoding the protein sensor fused to a targeting signal. The targeting signal directs the expression of the protein sensors to restricted cell locations. This makes it possible to measure the pH of a precisely defined cellular region or organelle

The present sequence is a fluorescnet protein used in the construction of a fluorescent protein indicator. The indicator comprises a sensor polypeptide that is responsive to a chemical, biological electrical or physiological parameter, and a fluorescence protein functional group. The sensor polypeptide is operatively inserted into the fluorescent moiety. The fluorescent indicator is useful for detecting the presence of a response inducing member in a sample. The method involves contacting the sample with the indicator and detecting a change in fluorescence, in which a change is indicative of the effect of the parameter on the sensor polypeptide. The novel fluorescent proteins are advantageous due to their reduced size as compared to the FRET (fluorescence resonance energy transfer)-based sensors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 LVTTLTYGVQCFSRYPDHWKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 П
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of the EGFP signal domain, which can be included in novel recombinant protease biosensors (PBS) of the invention. The PBS (see AAY79579-87)

Comprising at least 1 detectable polypeptic signal such as the present comprising at least 1 detectable polypeptic signal such as the present sequence; a second domain (see AAY79588-622) comprising at least 1.

CC comprising at least 1 reactant target sequence. A recombinant nucleic comprising at least 1 reactant target sequence. A recombinant nucleic acid (see AAA27627-43) encoding the PB, an expression vector, and a genetically engineered host cell are also claimed. A claimed method for identifying compounds that modify protease activity in a cell involves contacting a host cell that possesses the recombinant PB with a test compound, and determining the PB distribution in the host cell, where compounds that modify protease activity in a host cell include the protease activity by the test compound. Claimed kits for identifying compounds that modify protease activity in a host cell include the host cell. The PB is useful in high content screens to detect in vivo activation of enzymatic activity, and to identify specific activity based on cleavage of a known recognition motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 LVTVLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The specification describes a method for assessing the growth rate and death rate of a micro-organism within a predetermined time period in a desired environment. The method comprises introducing at least two method comprises introducing at least two micro-organisms, incubating luminescent and/or fluorescent products into the micro-organisms, incubating the micro-organism within the desired environment, and detecting luminescence and/or fluorescence after a predetermined time period. Use of two different markers within a micro-organism enables the differentiation between growth and death rates. The method is used to assess the growth rate and death rate of a microorganism within a predetermined time period in a desired environment. The present sequence represents a green fluorescent protein (GFP), and is encoded by a plasmid which encodes luminescent and fluorescent proteins, and is used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 VNRIBLKGIDFKEDGNILGHKLEYNYNSHNVYIMADKOKNGIKVNFKIRHNIEDGSVQLA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides melanin concentrating hormone (MCH) receptor (MCHR) chimeric and fusion proteins. The MCHR chimeric proteins comprise MCHR polypeptide regions from different species. The MCHR fusion protein comprise MCHR polypeptide region and a fluorescent polypeptide region joined directly, or via a linker, to the carboxy side of the MCHR polypeptide region proteins can be expressed by standard recombinant methodology. MCH action promotes feeding (orexigenic) and up regulation of MCH activity stimulates food intake. The present sequence represents a A. victoria green fluorescent protein (GFP) and a linker

                                                                                                                                The invention relates to a gene encoding proteins having cyan-green fluorescence characteristic and having a function of showing stable fluorescence characteristic in acid region. A method for the preparation of a cyan-green fluorescent protein is provided which involves a transforment transformed by a recombinant vector comprising the gene, where the transforment is cultured and the protein is collected from the culture. The present sequence represents the A. victoria green fluorescent protein (EGFP)
                                                                                                                                                                                                                                                                                                              9

The invention describes methods of automated detection, classification and identification comprising treating cells containing luminescent reporter molecules (I) in array of locations with a test substance, where (I) are detectors, classifiers or identifiers, imaging cells in each location to obtain luminescent signals and converting optical information into digital data to interpret presence of toxins in the test substance. The method are useful for detection of toxins chosen from proteases, ADP-ribosylating toxins, cytotoxic phospholipases, and exfoliative toxins. Three classes of cell-based luminescent reporter molecules such as detectors, classifiers and identifiers are described and serve as reporters of toxic threat agents. The first two levels of characterisation ensure a rapid readout of toxin class without several complex mixtures of known toxins. This is the amino acid sequence of a protease biosensor related signal sequence used in the cell-based
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 LVTVLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

or more primers that have a nucleotide sequence containing at least one mutation and a phosphorylated 5'-terminus are annealed to a template DNA and then subjected to an elongation reaction using a thermostable high-fidelity DNA polymerase, after which the phosphorylated 5'-terminus and fidelity DNA polymerase, after which the phosphorylated 5'-terminus and fidelity DNA polymerase, after which the phosphorylated 5'-terminus and the elongated terminus are ligated by means of a thermostable DNA ligase to synthesise a circular DNA containing the primers, a digestion in which the step of DNA synthesis is repeated several times to amplify the DNA containing the primers and then, at least DNAs other than the amplified circular DNA synthesis in which, with the several fragments obtained in the step of digestion as megaprimers, the megaprimers are annealed to the circular DNA synthesised above, followed by an elongation reaction performed using the thermostable high-fidelity DNA polymerase. The method is useful for mutagenesis, particularly for introducing certain mutations at certain sites of the nucleotide sequence. The present method is simple, speedy, economical and widely applicable. The present method is simple, speedy, economical and widely applicable. The present sequence is metagenesis in an exemplification of the invention. The EGFP is derived by altering the green fluorescent protein (GFP) sequence of Aequorea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121 VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising a phosphorylation polypeptide and a fluorescent protein or in operative linkage, a donor molecule, a phosphorylatable domain, a phosphoaminoacid binding domain (PAABD) and an acceptor molecule. The phosphorylation indicators of the invention are useful for detecting kinases or phosphatases in a biological sample. They are also useful in phosphatase inhibitor. The present sequence is Aequorea inhibitor or phosphatase inhibitor useful in second green fluorescent protein (EGFP) used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121 VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 125,

Batent No. 6130313

GENERAL INFORMATION:
APPLICANT: Kain, Steve
APPLICANT: Li, Xianqiang
TITLE OF INVENTION: Rapidly Degrading GFP-Fusion Proteins and Methods
TITLE OF INVENTION: Rapidly Degrading GFP-Fusion Proteins and Methods
FILE REFERENCE: D6100
CURRENT FILING DATE: 1998-04-17
EARLIER APPLICATION NUMBER: US 60/060,855
EARLIER PILING DATE: 1997-10-02
NUMBER: OF SEQ ID NOS: 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FEATURE:
CHER INFORMATION: Sequence of the EGFP-MODC422-461 fusion protein.

Sequence 1, Application US/09364946

Patent No. 6306600

GENERAL INFORMATION:
APPLICANT: Kain, Steve
APPLICANT: Kain, Steve
TITLE OF INVENTION: Rapidly Degrading GFP-Fusion Proteins and Methods
TITLE OF INVENTION: of Use
FILE REFERENCE: D6100CIP/D2
CURRENT APPLICATION NUMBER: US/09/364,946
CURRENT PELLING DATE: 1999-07-30
EARLIER APPLICATION NUMBER: US 09/191,233
EARLIER FILING DATE: 1998-11-13
NUMBER OF SEQ ID NOS: 14
: SEQ ID NO 1

LENGTH: 281

Patent No. 6150176

GENERAL INFORMATION:

APPLICANT: Taien, Roger Y.

APPLICANT: Miyawaki, Atsushi

APPLICANT: Miyawaki, Atsushi

APPLICANT: Miyawaki, Juan

APPLICANT: Miyawaki, Juan

APPLICANT: Menter, Rebekka M.

APPLICANT: Remington, S. James

TITLE OF INVENTION: FLUORESCENT PROTEIN SENSORS FOR

TITLE OF INVENTION: FLUORESCENT PROTEIN SENSORS FOR

TITLE OF INVENTION: PASSORING THE PH OF A BIOLOGICAL SAMPLE

FILE REFERENCE: 07257/071001

CURRENT PAPLICATION NUMBER: US/09/172,063

CURRENT FILING DATE: 1998-10-13

BARLIER APPLICATION NUMBER: 09/094,359

BARLIER FILING DATE: 1998-06-09

NUMBER OF SEQ ID NOS: 38

SOFTWARE: FastSEQ for Windows Version 4.0

Sequence 6, Application US/09085305;
Patent No. 6191269
GENERAL INFORMATION:
APPLICANT: Pollock, Allan
TITLE OF INVENTION: Selective Induction of Apoptosis in
TITLE OF INVENTION: Malignant Cancer Cells by Delivery of N-Termi
TITLE OF INVENTION: Interleukin-1-Alpha Pro-Piece Polypeptide
NUMBER OF SEQUENCES: 30
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bozicevic & Reed, LLP
STREET: 285 Hamilton Ave, Suite 200
COTTY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

"Complete genome sequence of Salmonella enterica serovar Typhimurium
                              diphosphate + L-leucyl-tRNA(Leu).
-!- SUBCELLUTAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10-OcT-2003 (Rel. 42, Created)

Aminoacyl-tRNA synthetase; Protein biosynthesis; Ligase; ATP-binding;
             diphosphate + L-leucyl-tRNA(Leu).
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

-!- CATALYTIC ACTIVITY: AFP + L-leucine + tRNA(Leu) = AMP + diphosphate + L-leucyl-tRNA(Leu).
-! GATELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     57; Gaps
